6G4SOCIETY

TOWARDS A SUSTAINABLE AND ACCEPTED 6G FOR SOCIETY

Vision

Our project aims to ensure that societal and sustainable values are properly embedded into the development of 6G technology, bringing a sociological perspective to technological development.

WHAT ARE OUR GOALS?

Get a better understanding of aspects influencing public acceptance of 6G

Support the development of an EU consensus framework for a value based, sustainable and ethics driven approach towards 6G

Engage and reach out to public audiences to build 6G social acceptance

Empower the 6G community to reflect EU policy and legislation into technology solutions

HOW WILL WE ACHIEVE THIS?

The project will engage key stakeholders from civil society, regulators, policymakers, media, and the general public, to ensure **correct and clear information about the expected impacts of 6G** technology.

It will also provide **methods, models, guidelines and policy recommendations** to develop a sustainable and socially accepted 6G.

HOW CAN YOU GET INVOLVED?

We have just launched our Citizen Survey

6g4society.eu/citizen-survey

6G4SOCIETY

6G4SOCIETY

6g4society.eu/citizen-survey

6G4SOCIETY

This survey is a unique opportunity for citizens to share their **experiences and opinions about current 5G technology and the upcoming transition to 6G.**

Why should you participate?

Your input helps guide European Union policymakers and technology providers toward developing more inclusive and sustainable communication networks.
